

TEAM ALBA RACING

RZR 1000 FRONT BUMPER INSTRUCTIONS

- 1) Mount the screen clips to the bumper. There are four holes in the back side of the bumper. Use the polished Allen head screws for this. Do not tighten the screws – just make them snug (but the clips should be able to move). See the picture with the screen mounted for an example. **DO NOT MOUNT THE SCREEN YET.**
- 2) Remove the plastic radiator grill from the RZR. There are 2 plastic tabs on the top. Push down and pull forward and the grill will come out.
- 3) Now mount the bumper to the RZR. Using 2 bolts, washers and nuts do the top first. Do not tighten the bolts yet.
- 4) Now install the bottom mounting bolts. Tighten the bottom and the top bolts.
- 5) Install the screen using the black Allen head screws and the Nylock nuts. Before you tighten these and tighten the screws going in to the bumper be sure the screen is centered.
- 6) Check all the bolts for tightness after your first ride and periodically after that.
