

Alba Racing RZR 1000 Rock Sliders Instructions

1. See picture 1. This shows the details on how to mount the retaining bolt assembly. [There are 3 mount tubes (posts) on each slider. One assembly will go in each tube]. Using a #12 socket with an extension, gently tighten each bolt (equivalent to 'finger tight'). Note--It is good if you can wiggle the expansion assembly a little.

Pic 1

2. See picture 2. It shows the 3 holes in the frame that the expansion assemblies will fit in. Align all 3 expansion assemblies with the frame holes and push them in. Make sure the posts are against the frame and tighten the bolts. [This is easier to do with a second person—one person holding the slider in place, and one person tightening the bolt].
3. Repeat the procedure for the other side.
4. Double check all your bolts for tightness.
