ALBA PRO RACE NERF BAR INSTRUCTIONS - YFZ 450

1) Remove stock footpegs, footwells and fender braces. Save the footpeg bolts and the fender bolt (you can use this one or the one provided)

2) Install the footpeg mounts. (See pic. 1) Note there is a left and a right stamped on the back of the bracket. R is brake side and L is shift side. Use the stock bolts with locktite. Tighten these bolts.

Pic1:

3) Install the forward nerf mounts. (see pic 2) Use the supplied short bolts and 1 spacer on each side. These mount in the forward lower engine mount bolt hole (remove the stock bolt, which you will not re-use). Do not tighten the bolts yet.
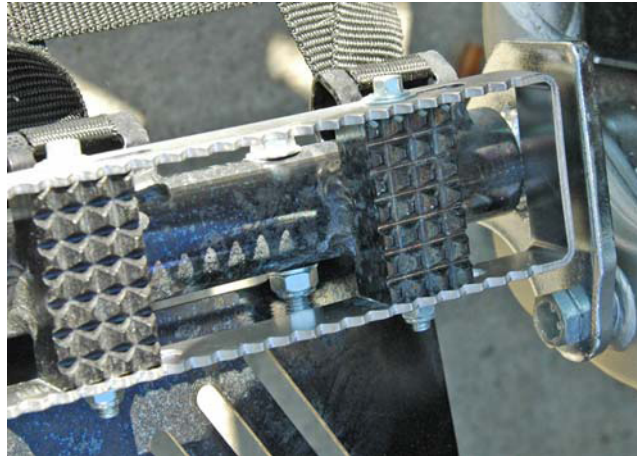

Pic2:

4) Install the nerf bar on each side. The foot peg tube goes on the foot peg mount and the forward tube goes over the forward mount tube.

5) Using the provided 10mm bolts and nuts put 1 on each side thru the hole in the tube under the footpeg, going thru the hole in the footpeg mount tube. Tighten this bolt on each side. (see pic 3)

Pic 3:

6) Tighten the forward mount bolt (the one that went into the engine mount hole) on each side.

7) Tighten the allen bolt on the clamp on the forward nerf bar mount on both sides.

8) Install the fender brace bolt and nut on each side and tighten. Note – You can use the stock bolt or the new ones that are provided.

9) The foot pegs are adjustable. Put both sides where you want them and tighten the two bolts and nuts on each side.

10) Install the nets on each side according to the diagram.

11) Re-check all bolts and nuts for tightness and you are ready to ride.
